SESSION SUMMARY

Measurement report.

Thermal profile and humidity / controlled-room observation

NODE TH-04 | 08:00 - 19:30 | 30-MIN INTERVAL | 24 READINGS

MEAN TEMPERATURE / C

22.9

Arithmetic mean of 24 readings

OBSERVED RANGE / C

21.4 - 25.1

Minimum to maximum

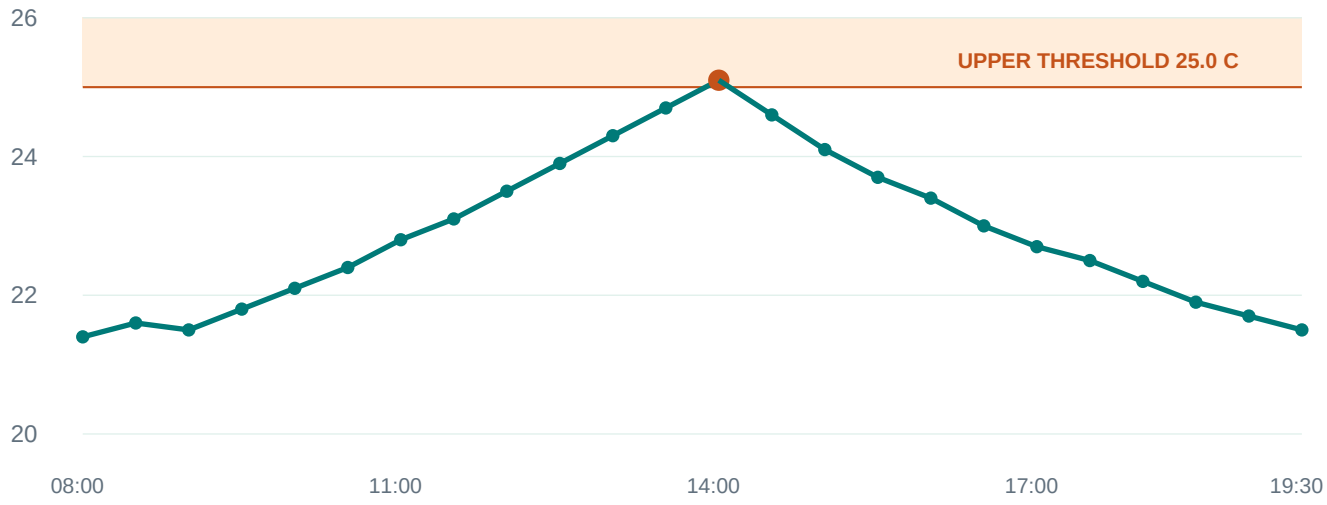
ABOVE 25.0 C

01 / 24

Threshold: strictly greater than

01 / Temperature trend

Temperature (C) against local time. All points are simulated.



TEAL Temperature readings AMBER Above-threshold region / reading

Reading the session

Peak: 25.1 C at 14:00.

A gradual rise is followed by a return toward the morning baseline.

One reading exceeds the illustrative limit. See the complete log on page 2.

DEMONSTRATION ONLY / No physical sensor, calibration or compliance claim.

TRACEABLE READINGS

The measurement log.

Complete dataset / temperature, relative humidity and threshold status

24	19:30	**21.5**	48	WITHIN LIMIT

METHOD & INTERPRETATION

Fixed demonstration values sampled every 30 minutes. RH = relative humidity.

Status compares temperature only: above 25.0 C = above limit; otherwise within limit.

The threshold is illustrative and is not a safety or calibration specification.
